

Mobile Device Management and BYOD Policy

Version 1.0 | Owner: Security Operations | Effective 2026-01-01 | Next review 2027-01-01

1. Purpose

This policy covers how company data is protected on mobile devices — both company-issued and personal devices used for work. It explains what Mobile Device Management (MDM) is, what IT can and cannot see on enrolled devices, and the rules for using personal devices (BYOD — Bring Your Own Device).

2. Company-issued mobile devices

Zuqah Technologies may provide company mobile phones to employees in specific roles. Company phones are enrolled in MDM from the time of issue and are subject to all the rules in section 4.

3. BYOD — using a personal device for work

3.1 Entitlement

Employees are not required to use personal devices for work. Zuqah Technologies provides a laptop for all employees.

However, employees who choose to access company email, calendar, Teams or the HR portal on their personal smartphone or tablet must enrol the device in MDM.

3.2 What requires MDM enrolment

The following access requires MDM enrolment:

- Company email (Microsoft Outlook) on a personal phone or tablet
- Microsoft Teams on a personal phone or tablet
- Any company application accessed through the Microsoft Authenticator app
- OneDrive or SharePoint via the mobile app

Accessing the HR portal through a mobile browser does not require MDM enrolment, but the session is protected by MFA.

3.3 Opting out of BYOD

If you do not wish to enrol your personal device in MDM, you may still access company communication by:

- Using a web browser on your personal device for email and Teams

(no MDM required)

- Requesting a company-issued device from IT (subject to role eligibility)

4. What MDM does on your device

MDM (Microsoft Intune) enforces security policies on enrolled devices. Here is exactly what it can and cannot do:

4.1 What MDM CAN do

Capability	Purpose
Enforce PIN / biometric lock on the device	Prevents unauthorised access
Encrypt the device storage	Protects data if device is lost
Enforce OS update requirements	Keeps the device patched against known vulnerabilities
Install required security certificates	Allows access to company systems
Remote wipe of company data only	Removes company email and apps from the device without touching personal data
Full remote wipe of a company-issued device	Fully erases company phones if lost or stolen

4.2 What MDM CANNOT do

Read your personal emails or messages	MDM has no access to personal accounts
See your personal photos or files	Personal storage is not accessible
Track your location	Location tracking is not enabled in Zuqah Technologies' MDM policy
Monitor personal app usage	App inventory is not collected for personal devices
See your browsing history	Personal browser data is inaccessible
Access your personal contacts (for personal device)	On a personal device, only company contacts in Outlook are managed

In plain language: MDM can protect company data on your device and wipe it if needed, but it cannot spy on your personal life.

5. Enrolment process

- 1. Install Microsoft Intune Company Portal from the App Store (iOS) or Play Store (Android)
- 2. Sign in with your Zuqah Technologies account

- 3. Follow the guided enrolment steps. The process takes approximately 10 minutes
 - 4. Once enrolled, company apps (Outlook, Teams, OneDrive) can be configured
- Contact the IT Service Desk at it@zuqahtechnologies.com if you encounter any issues during enrolment.

6. Security requirements for enrolled devices

Enrolled personal and company devices must meet the following requirements:

Requirement	Standard
OS version	Within 2 major versions of the current release
Screen lock	PIN of minimum 6 digits, pattern or biometric
Jailbreak / root	Not permitted — jailbroken devices are blocked from company access
Encryption	Enabled (enforced by MDM on enrolment)

Devices that fall out of compliance (e.g., OS not updated) will be blocked from company resources until the issue is resolved.

7. Lost or stolen devices

If a device used for work — personal or company-issued — is lost or stolen:

- 1. Report it to the IT Security team immediately:
security@zuqahtechnologies.com or call the IT helpline
- 2. IT will initiate a remote wipe of company data on the device
- 3. Change your Zuqah Technologies password and report any suspicious account activity

For personal devices, only company data will be wiped. Your personal photos, messages and apps will not be touched.

For company-issued devices, a full wipe will be performed.

8. Leaving Zuqah Technologies

On your last working day, IT will unenrol your personal device from MDM. This removes company email, Teams and any managed apps. Your personal data is completely unaffected.

Company-issued devices must be returned as described in the Leaver and Offboarding Policy.

9. Personal use of company devices

Company phones and laptops are primarily for work use. Limited personal use (checking personal email, general browsing) is permitted as long as it does not interfere with work and does not involve accessing inappropriate content. Full rules are in the IT Acceptable Use Policy.

Company devices are monitored at the network and device level for security purposes. Employees should have no expectation of privacy for activities conducted on company devices.

10. Contact

MDM enrolment help: it@zuqahtechnologies.com

Lost or stolen device: security@zuqahtechnologies.com (24-hour response for security incidents)

Sample content for demonstration purposes. Zuqah Technologies is a fictional company and this document describes no real organisation's policy.
